### Consistent Register Quality and Reduced Waste Drive Purchase of Second System

CC1, Inc. of Portsmouth, New Hampshire announces that Custom Printed Products, Inc. of Bossier City, LA recently installed a second **CC1 DRC 6000L Automatic Register Control** on a nine color MARK ANDY 4150 press. The project included two CC1 Register Control “Smart Cameras” and the DRC 6000L touch screen user interface. .

Richard Nicholson, President, says of the decision to purchase a second CC1 Register Control System, “We installed our first CC1 System on our Ten Color MARK ANDY in 2008. The immediate reduction in waste savings coupled with an increased consistency in register quality, particularly during splices, made the decision to purchase a second CC1 system for our next MARK ANDY press an easy one”.

“Prior to the installation of our first DRC 6000L, re-establishing register following a roll change was a real challenge. The DRC 6000L immediately re-establishes register after a splice, reducing waste and increasing register consistency.”
