

Steinhauser, Inc. reports up to 75% Makeready waste savings with CC1 DRC-6000L Automatic Register Control.

Newport, KY: Steinhauser Inc. installs
CC1 DRC 6000L Automatic Register Controls
on COMCO Proglide presses.

Mark-to-Mark Register Control

CC1, Inc. of Portsmouth, New Hampshire announces that Steinhauser Inc. of Newport, KY recently retrofitted their eight and ten color Servo Driven COMCO Proglide presses with CC1 **DRC 6000L Automatic Mark to Mark Register Control** systems.

Makeready Waste Reduction

David Smith, Pressroom Manager, says “The Mark to Pulse Register Control System that we replaced with the CC1 DRC 6000L required that the operators set manually establish during makeready. The ability of the CC1 Mark to Mark Register Control System to automatically establish print register during make-ready has reduced our startup waste on a ten color job by as much as 75%”.

VISION In Print Quality and Savings.

Consistent Register Quality

“The DRC 6000L monitors and automatically corrects for changes in register due to mill splices, speed changes and splices during the entire production run. Previously our operators would need to monitor and make manual corrections to such events that would affect the initial register setting.”

“The LED Back Strobes allow the register control cameras to easily read the register control marks on clear unsupported films”.

“We are very pleased with the results of both system installations and are seeing very tangible return on our investment”
